BACKGROUND

The dataset used for this project is a survey of various data professionals created by AlexTheAnalyst. The survey, conducted in 2022, had 630 anonymous participants from around the globe. The dataset provides information on the participants' current roles, current salaries, industries, favorite programming languages, genders, level of happiness with salaries, work-life balance, and more.

PROJECT DESCRIPTION

- To better understand variations among the listed data professions, such as, popularity, salary, programming language, etc.
- This will help to discover underlying trends based on the submitted responses.

LIST OF KEY INSIGHTS

1. Average salary by current job title.
2. Happiness with work-life balance and salary.
3. Most favorite programming language.
4. Career switch.
5. Count of current job titles.

KEY INSIGHTS

Average Salary By Current Job Title

Data scientists have the highest average salary of \$93.78. \$65.09 for the Data Engineers, and \$55.30 for the Data analysts.

KEY INSIGHTS

Happiness With Work-Life Balance And Salary

Data Scientists

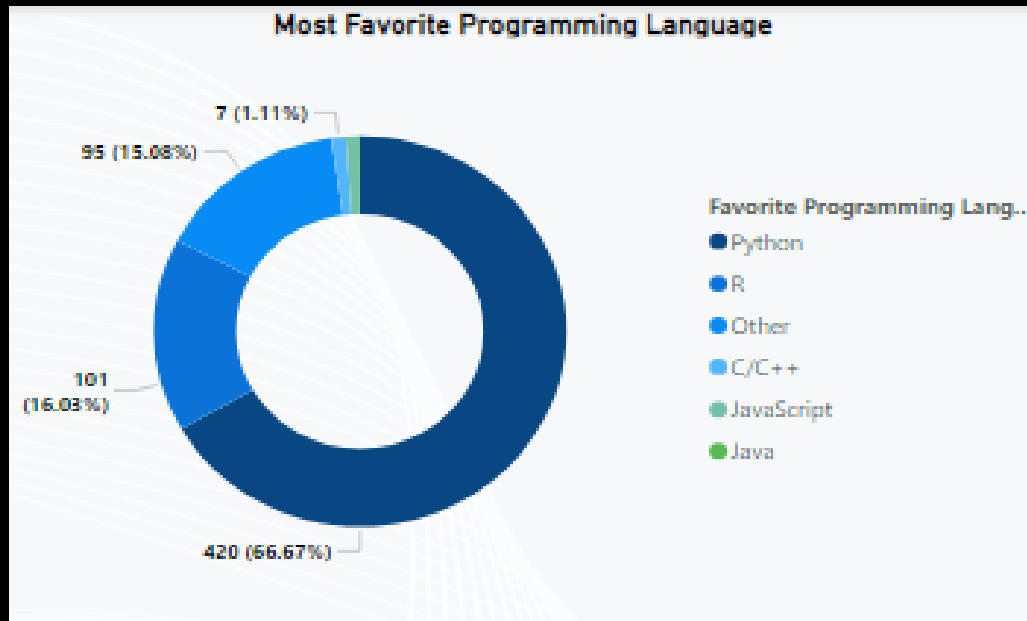

Data Analysts

Both group of professionals have above average satisfaction with work-life balance. However, the data analysts have a below average score unlike the data scientists for salary satisfaction.

KEY INSIGHTS

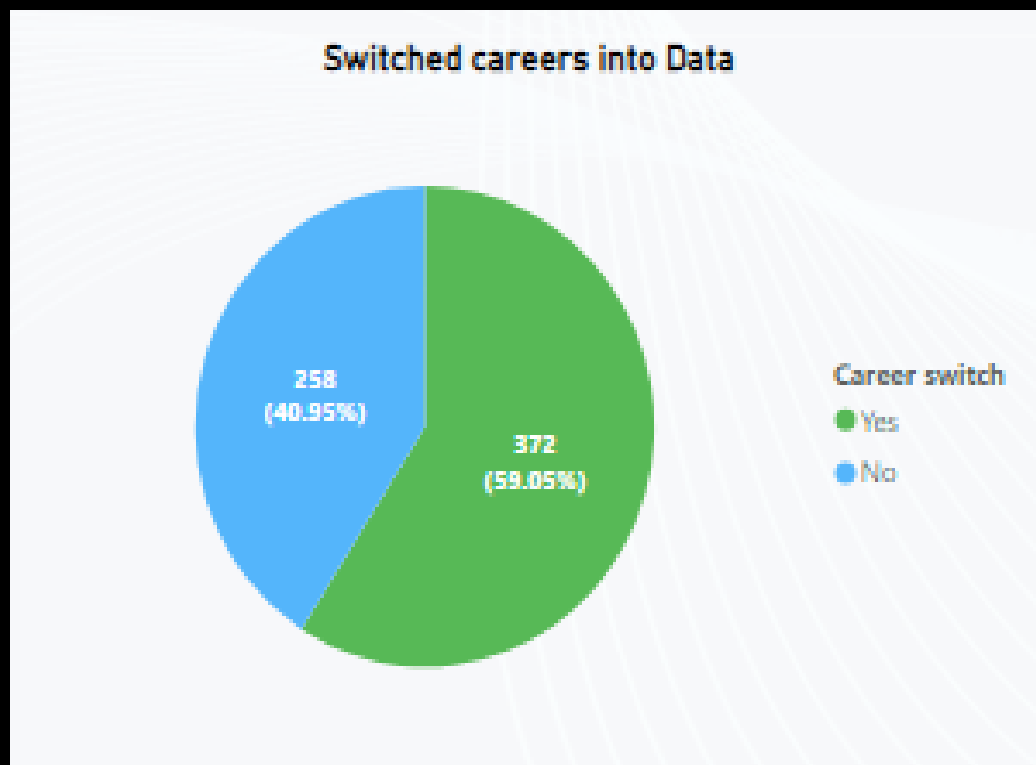

Most Favorite Programming Language

About 67% of participants chose Python as their favorite programming language while 16% chose R. Both are commonly used in all the data professions.

KEY INSIGHTS

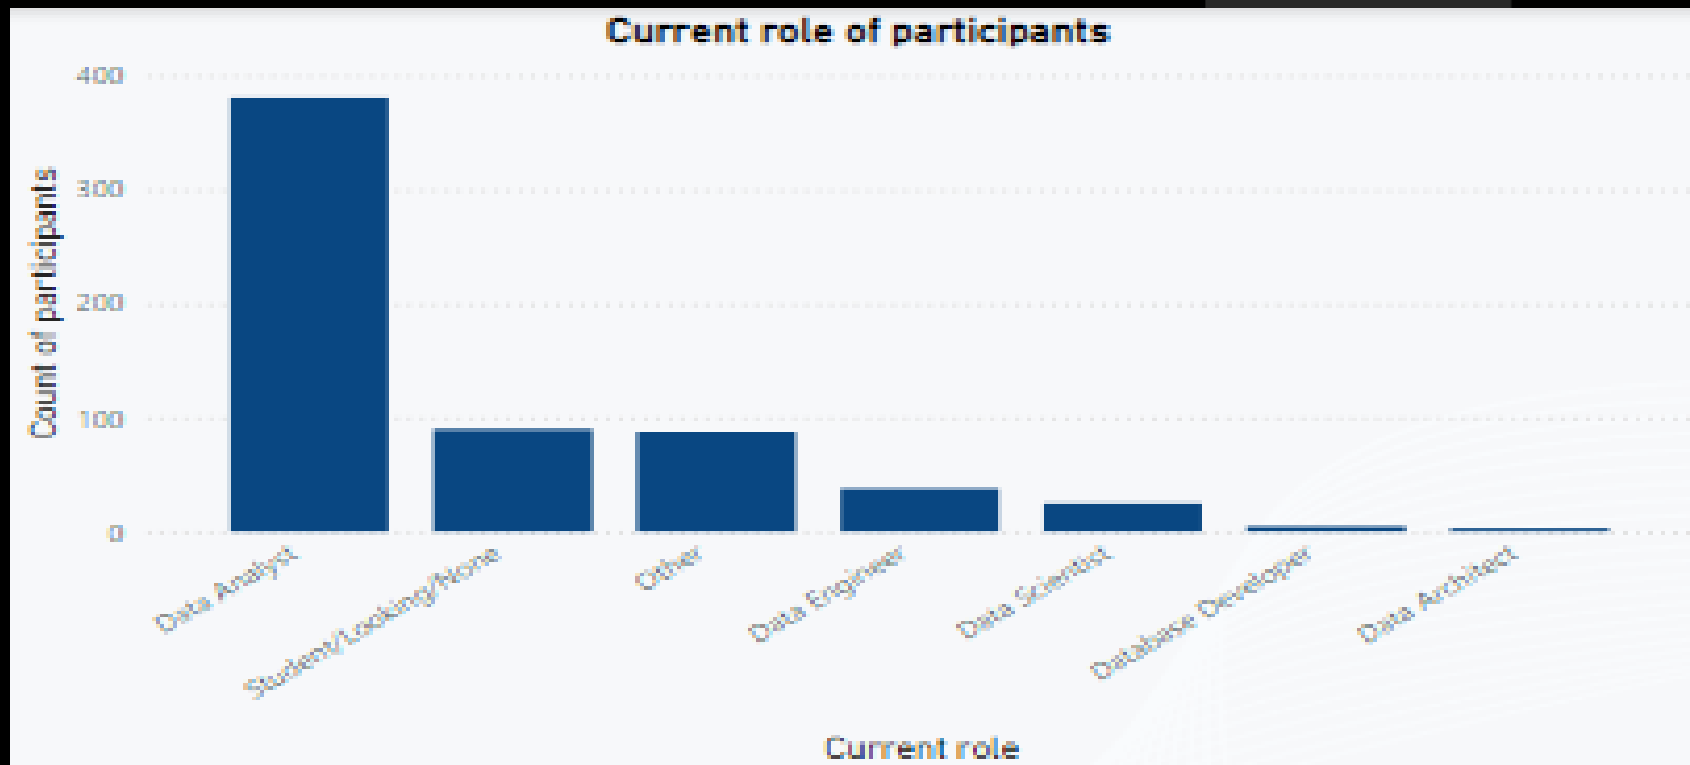

Career Switch

The majority of participants switched careers into various data professions.

KEY INSIGHTS

Count of Current Job Titles

381 Data Analysts; 38 Data Engineers; 25 Data Scientists; 5 Database Developers; and 3 Data Architects

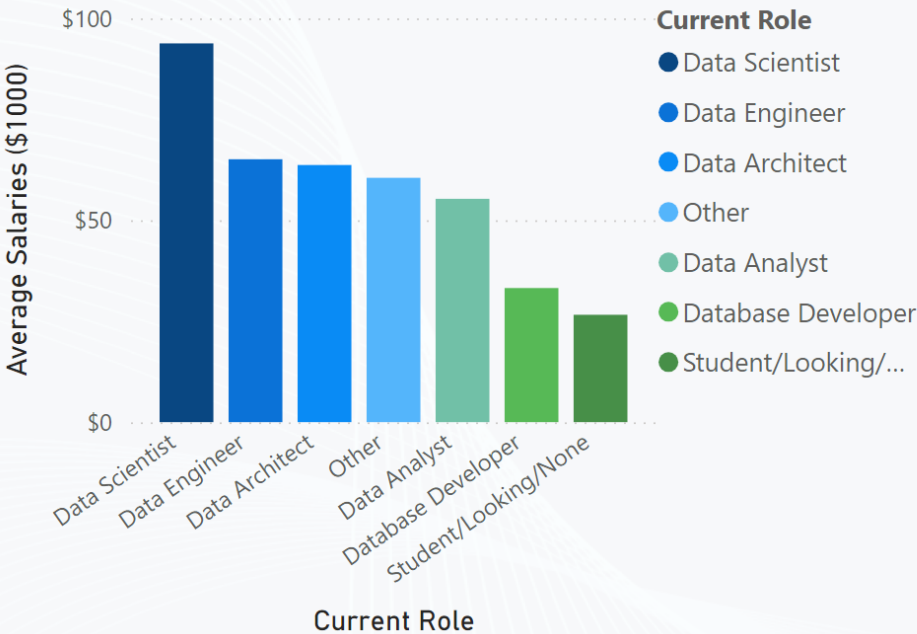

SUMMARY AND CONCLUSION

The majority of survey participants are data analysts, and while they report a good work-life balance, their salary satisfaction is notably lower compared to data scientists. Python and R are widely used across all data professions, with Python emerging as the most popular, favored by 67% of respondents.

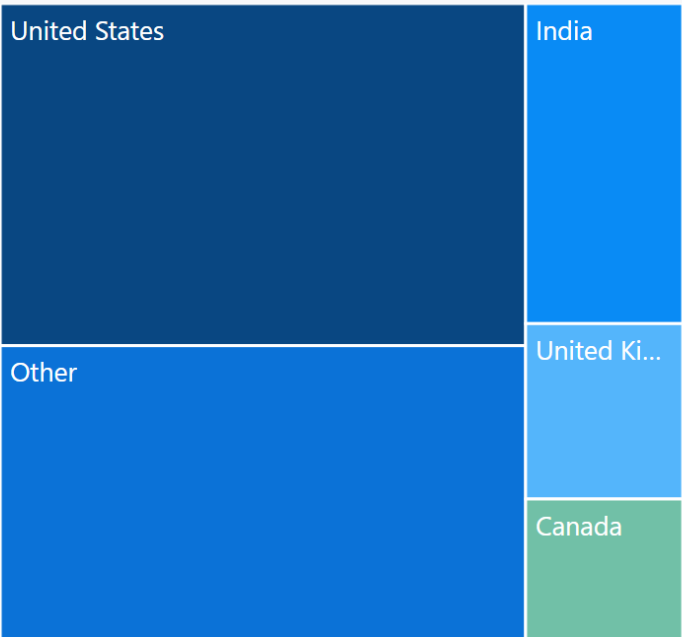

Data-related professions are becoming increasingly popular, with many respondents having transitioned into these careers.
